

OPEN POSITION — TANDEM LABS-NEW JERSEY FACILITY

Pharmaceutical Project Manager

Attract new business from existing and new pharmaceutical/biotechnology clients based primarily in Japan. Develop new business for preclinical and clinical drug development. Collect specific information and distribute drug development studies, issue proposals/quotations, distribute financial-related information, lead the overall project portfolio, build and maintain account qualification. Ensure that contract and technical specs are met, schedule equipment and lab personnel, ensure that supplies are available and personnel is trained and certified, and that all raw data is properly documented and maintained. Ensure that FDA regulations and guidelines are followed. Prepare final reports and respond to QAU project specific inspections. Direct analytical chemists to conduct laboratory portion of drug development studies. Provide marketing information and support marketing activities.

Requirements:

Require M.S. or M. Pharm in Natural Sciences, Pharmaceuticals, or related field. Prior experience or education to include thorough understanding of preclinical and clinical drug development process, specific knowledge of project management in a drug development environment, and ability to effectively review analytical data and final reports. Send resumes to: hr@tandemlabs.com or fax to (801) 313-6437.
